YUKI Précision SAS sets up in Lyon

The French subsidiary of the Japanese company YUKI Precision Co., Ltd will be established in Lyon on May 12, 2015.

Specializing in manufacture of high precision machined parts, YUKI Precision Co., Ltd.(CEO : Masato OTSUBO, number of employees : 26 pers., in Chigasaki and in Yokohama) will search and establish a partnership with European industrial companies through this subsidiary. This is the first step of the global development outlined in the corporate strategy, "100-year company vision of YUKI Precision"

The CEO is confident that the technology of YUKI Precision, high precision and high quality, can meet the specific needs of the R&D researchers and developers in advanced industrial sectors of Europe. Manufacturing methods used in YUKI under the strictly controlled quality management systems for aerospace should easily be appreciated by the aerospace industry in France, as they are the second largest manufacturers in the world in this sector.

Despite the significant numbers of Japanese companies moving into France, YUKI Précision SAS would be the first in the precision parts machining sector to set up in France. This will give Japanese partner companies of YUKI Precision, such as Chigasaki Monotsukuri Cluster in Kanagawa inroads to Europe, or entice other Japanese SME's with advanced technologies to go abroad and establish an entity in Europe.

Ms. Ayumi Kitano joined this new subsidiary YUKI Précision SAS as the Director France. She has extensive experience of supporting Japanese and foreign companies in Rhône-Alpes, France. Her mission starts with the commercial development of YUKI Précision SAS in France as well as in Europe. YUKI Précision SAS will realize a policy of "High quality manufacturing knows no borders." by reaching the European market and establishing partnerships.

YUKI Precision Co., Ltd.

Founded in 1950 by Saburo Otsubo, YUKI Precision is an aerospace grade precision parts machining company. With corporate strategy focused on high value added machining, obtained quality management system standard JIS Q 9100 for production of aircraft and space parts. Production management using IT tools have won Management Awards for Small and Medium Enterprises Award from Ministry of Economy, Trade and Industry.

At the Paris Air Show, our "precision spinning top" which we developed in order to give our overseas customers a better understanding of our precision of our product attracted public attention and was shown in feature segments on NHK and Nippon TV. YUKI's involvement in projects is covered in various media outside industrial publications, such as Chronos Japan edition (Project Tourbillon) and Nihon Keizai Shimbun (marketing strategy).
